

DATA PROCESSING

VOLUME 12

List of contents and subject index for 1970

The list of Contents gives the page numbers, titles and sub-titles of articles published during 1970. An item in the Subject Index is cross-referenced to the list of Contents by the number of the page in which the reference appears. For example, the item "TESTMASTER" is stated in the Subject Index to appear on page 133; reference to the Contents shows that page 133 is in the article entitled "Aids to programming efficiency".

THE INTERNATIONAL JOURNAL FOR COMPUTER MANAGEMENT

CONTENTS FOR 1970

NUMBER 1 JANUARY-FEBRUARY

Viewpoint: Managing or mismanaging the computer	19
Modular packages for stock control	20
a suite of programs from Burroughs for formulating stock-holding policies and inventory control	
Some techniques for database management	24
with more powerful computing facilities Management Information Systems may become a reality	
When will we ever learn?	29
some shortcomings on commercial data processing	
Modules for management	32
first in a series of articles on managing the computer explores the implications of a formal management system	
The Stock Exchange dilemma	37
the United Kingdom Securities Industry still has to come to terms with the computer	
An objective assessment of software	45
some ways to make meaningful comparisons of computer systems	
Topics	48
new equipment—applications—software	
IBM System/3	58
a versatile computer for the small business	
Display system for text editing	62
tape editing operations can be speeded up with equipment introduced by Cossor	
<hr/>	
Supplement Microfilm	
Micromation—a new concept in data processing	65
Microfilm and the systems analyst	67
Microfilming for security	68
Tables	70
Information retrieval with PCMI	73
Electron Beam Recording	74

NUMBER 2 MARCH-APRIL

Viewpoint: Is the pace fast enough?	101
Kienzle System 6000	102
a recent contender in the market for visible record computers	
Decimalisation without tears	106
Centre-File intends to avoid conversion problems with the change to decimalisation in 1971	
It pays to plan	110
effective results from a computer system demand effective planning and control	
Company Profile: KODE	113
Topics	116
new equipment—applications—software	
Aids to programming efficiency	128
four software packages designed as aids to program testing and documentation	
The essence of C.A.D.	138
a review of the way in which the computer can help the design engineer	
<hr/>	
Supplement Computer Graphics	
Computer Graphics '70—a Preview	145
The role of the service bureau	146
Time-sharing and the graph plotter	148
Bringing design closer to production	151
Graphics in the business world	154
Graphic output for CPM	156
Tables	157
A program for pipework design	162
Optimising graphic display	164

NUMBER 3 MAY-JUNE

Viewpoint: The new wave of computer professionals	191
When and how much to order	192
Wadham Stringer has introduced a parts control system based on an ICL 1901 computer	
Computer aided work estimating	197
a rapid and effective means of estimating times for the manufacture of parts at Babcock and Wilcox	
Programs for matching people	200
can people be matched using selective procedures based on scientific foundations?	
Data collection—the complete monitoring approach	203
Computer performance appraisal	206
a check on the efficiency of a computer should be regarded as no more unusual than the annual financial audit	
Topics	212
new equipment—applications—software	
An experiment with COM	224
the National Westminster Bank is the first bank in Britain to make use of computer output to microfilm techniques	
Programmed reporting and information system	227
a software package called PRISM introduced by Cybernetics Limited	
Time-sharing/batch processing	230
some comments on a subject of topical interest	
Company Profile: Computer Instrumentation	232
SOVAL—a new method of data preparation	236

Supplement Character Recognition

Recent developments in OCR	239
Document design for machine reading	244
A case for character recognition	247
Tables	250
Multi-font character reading	254

NUMBER 4 JULY-AUGUST

Viewpoint: A Surfeit Of Exhibitions	279
Forecasting demand and review	280
a computer-based sales forecasting system which takes dynamic characteristics of demand into account	
Magnetic tape—the static build-up problem	283
with proper control static electricity can be reduced	
What next at the Stock Exchange?	285
The Human Factor	286
social as well as technical objectives should be made explicit before introducing computers	
Computer-controlled Data Preparation	293
a survey of seven systems which are forerunners of a new method of preparing data input	
Topics	306
new equipment—applications—software	
OS/200 database subsystem	316
Honeywell's approach to database techniques brings some new features to light	
Now you can afford them	320
low-cost means of implementing standards and procedures	
New Literature	322

Supplement On-line computing

The Baglan Bay Project	325
National network for IDH	329
On-line information systems	334
A remote terminal service—the pros and cons	338
On-line patient records	342

NUMBER 5 SEPTEMBER-OCTOBER

Viewpoint: "Minis and Maxis"	367
Hire purchase on microfilm	368
at Court (Bros) microfilm aids the flow of accounting data across the Atlantic	
"A Small Giant"	370
a further look at the B500 computer	
Time-sharing on the B5500	374
Burroughs is expected to introduce a time-sharing service in Britain	
Super Scale OCR	377
CDC's activities in the OCR field continue to expand	
Automated cost estimating	380
computers can help to avoid errors in pricing quotations	
Centralise or decentralise?	384
how Monsanto has tied together its world-wide computer operations	
Handling the turnaround at Bensons	387
Topics	390
new equipment—applications—software	
Systems design—can it be left to the experts?	402
perhaps not if the intention is to establish a system capable of implementation	
Some problems of user management	405
decisions are all too frequently taken by systems analysts and programmers and not by managers	
VISCOUNT	408
the COBOL for visible record computers!	
New Literature	411
<hr/>	
Supplement Computer 70	
Showcase of the year	417
Seminar programme	418
Table of exhibitors	420

NUMBER 6 NOVEMBER-DECEMBER

Viewpoint: The Data Bank Society	463
Some new trends on the software front	464
automatic design techniques are likely to play an important part in software development	
Automated PERT	466
standardised sub-networks can be more efficient than the "one-off" method	
Computamap	469
a computer-based system for planning distribution	
Getting a measure	470
Geigy (UK) Limited has used work study methods in its computer installation with justifiable results	
Talkers and not doers?	478
the views of all sections of the computer industry were well aired at the Infotech "State of the Art Lectures"	
Order handling at Penguin	481
a Honeywell 1200 computer is helping to control the distribution of 30 million books a year	
Topics	484
new equipment—applications—software	
Target Group Index	500
the British Market Research Corporation is improving the efficiency of advertising with the aid of a computer	
New Literature	504
<hr/>	
Supplement Software Packages	
Evaluating software packages	507
Assessing profit and loss	510
Make or buy	513
A software information service	514
Tables	516
